¹ no tolls are due when travelling exclusively on this section

² service areas

³ tolls are due only when travelling northwards

Electronic tolls

Since 15 October 2010, a new electronic toll system applies to all vehicles driving on some specific motorway sections (*Scut's*) in North-Western Portugal. Toll sections are signposted. There are neither barriers nor tollbooths.

<i>(Tarifs at 15.10.2010, in euros)</i>	2 axes	3 axes	≥ 4 axes

Before driving on toll roads, the vehicle must be equipped with an onboard unit.

In cases of *short duration stays* in Portugal or *occasional users*, drivers should rent a temporary device (*DT device*) at petrol stations or post offices. The rental price is proportional to the time of use. It also requires payment of a deposit with an amount equal to the selling price of the device, which will be refunded upon return of the device. When renting the device, the driver can choose between two payment modes: automatic payment (debit card) or pre-payment with a minimum amount of 100 euros. In this case, the balance of unused credit is not refundable.

In cases of *long duration stays* in Portugal, drivers should use an *Official Toll Collection device* (DECP) which can be purchased at *Via Verde* stores or at other toll collection companies for approximately 27 euros. There will be an automatic payment system (debit card or prepaid account) with this device.

Important: The pre-payment is valid for 90 days and must be renewed; otherwise the equipment will be invalid.

Inspected vehicles which are not equipped with a toll device will be fined 10 times the toll rate, with a minimum fine of 25 euros.

Further information on tolls may be found from the websites below:
