**IRU Academy**

#### Lesson 1.1

Forces affecting vehicle in motion

Loading, slowing, handling of goods with respect of safety regulations and correct usage of the vehicle

The Laws of Physics Applied to Moving Vehicles

When a vehicle rounds a curve it has a lateral force pushing it to the outside of the curve. This is known as the centrifugal force or lateral 'G'. This lateral 'G' force increases with sharper corners and increased speed. Trucks have a higher centre of gravity than a motor car, and therefore in most cases a loaded truck will roll before their tyres lose traction and slide.

Please note that all Certificates & Diplomas are managed by AOL.

Other features of the ACM include a **Calendar of upcoming Events**, a **Message Board** to receive notifications on Programme updates.

My colleagues are interested in the ACM. How can they get access?

Access to the ACM can be obtained upon request to the IRU Academy (mailto: [Academy@iru.org](mailto:Academy@iru.org)). Access is restricted to ATI staff and instructors **directly involved** in ATI Programmes.

Will I be notified when new materials are available?

All **users with personal accounts** will be notified of any major updates to IRU Academy Programme Materials **by e-mail**. Material on the **ACM will always be the latest, most up-to date version available**, so please consult the ACM accordingly.

My ATI has training materials we would like to share with other members of the IRU Academy. How to proceed?

Great! Please send the materials to the **IRU Academy**. We will upload the materials **and inform other ATIs** of the new additional resources available to them.

# Benefits of the ACM

---

## Centralised resources for ATIs

- Documents, Videos, Interactive Content

## Ease of access

- On-line, Real-Time access to latest versions
- Multi-lingual Interface to meet your needs

## Expanding platform

- Content is regularly updated
- Platform conducive to knowledge sharing
- Events and Regional Activity updates
