Climate change: The role of sustainable inland transport in emissions reduction and adaptation

Umberto de Pretto
Secretary General, IRU
We are committed to help achieve the Paris climate goals

• Long-term transition
• Short-term quick wins
IRU decarbonisation vision

Our five principles

1. Vehicle technologies
2. Alternative fuels
3. Operational measures
4. Collective transport
5. Driver behaviour
The right fuel, for the right job, in the right place - to reduce CO² emissions quickly and effectively
Upgrade public transport on our roads

Fast, cheap and flexible investments to reduce CO² emissions, up to 70% for long distance coach, over 95% for urban bus
Ease traffic at borders

Accede to and fully implement the TIR Convention, to reduce CO₂ emissions
Quick wins

Encourage higher capacity trucks

Harmonise international standards to reduce CO$^2$ emissions, by up to 40%
Quick wins

Train and certify drivers

Well trained drivers can reduce CO$_2$ emissions, by up to 15%
